CONTENTS OF VOLUME 57

NUMBER 1, MARCH 1984

G. W. CANTERS, H. A. O. HILL, N. A. KITCHEN, AND E. T. ADMAN. A Proton NMR Study of the Electron Exchange between Reduced and Oxidized Azurin from <i>Pseudomonas aeruginosa</i>	1
R. C. STEVENSON. Triplet State EPR Spectra	24
P. S. PHILLIPS AND F. G. HERRING. An Evaluation of Lineshape Analysis in ESR Using Dispersion vs Absorption (DISPA)	43
M. G. MUNOWITZ, T. H. HUANG, C. M. DOBSON, AND R. G. GRIFFIN. High-Resolution Dilute Spin Dipolar NMR Spectroscopy in the Solid State	56
A. SCHWEIGER AND HS. H. GÜNTARD. Polarization-Modulated ENDOR Spectroscopy	65
V. P. CHACKO AND R. G. BRYANT. Electric Field Gradient Modulation and Nuclear Magnetic Relaxation in Hexacyanocobaltate Ion	79
JACOB SCHAEFER, E. O. STEJSKAL, R. A. MCKAY, AND W. THOMAS DIXON. Phenylalanine Ring Dynamics by Solid-State ¹³ C NMR	85
CHANTAL WYNANTS, KLAAS HALLENGA, GEORGES VAN BINST, ALAIN MICHEL, AND JACQUELINE ZANEN. Assignment of Amino Acids in Peptides by Correlation of α -Hydrogen and Carbonyl Carbon-13 Resonances	93
JUDITH G. SHELLING, MICHELE E. BJORNSEN, ROBERT S. HODGES, ASHOK K. TANEJA, AND BRIAN D. SYKES. Contact and Dipolar Contributions to Lanthanide-Induced NMR Shifts of Amino Acid and Peptide Models for Calcium Binding Sites in Proteins	99
ROBIN K. HARRIS, MAXWELL J. O'CONNOR, EIRIAN H. CURZON, AND OLIVER W. HOWARTH. Two-Dimensional Silicon-29 NMR Studies of Aqueous Silicate Solutions	115

NOTES

J. A. J. LOURENS AND E. C. REYNHARDT. Proton Spin-Lattice Relaxation from Classical and Tunneling Motions of NH ₃ Groups in Co(NH ₃) ₆ Cl ₃	123
R. BOSCAINO AND J.-P. KORB. Determination of Spin-Packet Lineshape in Dilute Ruby Samples by a Fast Deconvolution Procedure Applied to Inhomogeneous EPR Lines	127

GEORGE C. LEVY, ANDRZEJ EJCHART, PAUL S. MARCHETTI, AND RANDOLPH L. RILL. Effects of Intercalated Ethidium on DNA Con- formational Dynamics. A Reevaluation by ^{31}P and ^{13}C NMR Studies	130
LARRY WERBELOW. Frequency Dependence of Relaxation Rates and Nuclear Overhauser Effects. Coupled Nuclei with Gyromagnetic Ra- tios of Opposite Sign	136
BARRY J. KIMBER. Improved Storage of NMR Data	140
Q. ZH. GUO AND R. E. J. SEARS. Fluorine Chemical Shifts in the Metal Hexafluoroarsenates	143
COMMUNICATIONS	
CHRISTOPHER C. FELIX AND B. S. PRABHANANDA. Signs of Carbonyl ^{13}C Hyperfine Splittings	146
T. T. NAKASHIMA, BOBAN K. JOHN, AND R. E. D. MCCLUNG. Selective Two-Dimensional Heteronuclear Shift Correlation	149
D. MÜLLER, A. RETTEL, W. GESSNER, AND G. SCHELER. An Application of Solid-State Magic-Angle Spinning ^{27}Al NMR to the Study of Ce- ment Hydration	152
THOMAS H. MARECI AND H. RALPH BROOKER. High-Resolution Mag- netic Resonance Spectra from a Sensitive Region Defined with Pulsed Field Gradients	157
D. NEUHAUS, G. WIDER, G. WAGNER, AND K. WÜTHRICH. X-Relayed ^1H - ^1H Correlated Spectroscopy	164
ANNOUNCEMENTS AND NEWS ITEMS	169
NUMBER 2, APRIL 1984	
JOHN HOMER. Potential Errors in Volume Magnetic Susceptibility Corrections to NMR Chemical Shifts When Using a Heteronuclear Field/Frequency Lock	171
J. G. MOHANTY AND J. M. RIFKIND. The Effect of Temperature on ESR Signal Intensities in Aqueous Solutions	178
JAY W. PETTEGREW, DONALD E. WOESSNER, NANCY J. MINSHEW, AND THOMAS GLONEK. Sodium-23 NMR Analysis of Human Whole Blood, Erythrocytes, and Plasma. Chemical Shift, Spin Relaxation, and Intra- cellular Sodium Concentration Studies	185
ARDEN D. BOERSMA, MARTIN A. PHILLIPPI, AND HAROLD M. GOFF. Ap- plication of Carbon-13 NMR Spectroscopy for Measurement of Antifer- romagnetic Coupling in μ -oxo Iron(III) Porphyrin Dimers	197

JEFFREY SKOLNICK, DENNIS PERCHAK, AND ROBERT YARIS. Restricted Internal Segmental Rotational Diffusion Model with Segment-Segment Interactions. Application to ^{13}C NMR	204
CHRISTOPHER J. TURNER AND PAMELA B. GARLICK. One- and Two-Dimensional ^{31}P Spin-Echo Studies of Myocardial ATP and Phosphocreatine	221
G. R. SINCLAIR, J. R. PILBROW, D. R. HUTTON, AND G. J. TROUP. Angular-Modulation-Induced Reverse-Phase First-Derivative Field-Swept EPR Spectra	228
S. GANAPATHY, V. P. CHACKO, AND R. G. BRYANT. ^{13}C Chemical Shielding Anisotropies of Metal Acetates	239
MARY L. SEVERSON AND GARY E. MACIEL. A Molecular Orbital Study of the Dihedral Angle Dependencies of Vicinal Carbon-Carbon Coupling Constants	248
J. P. MARCHAL AND D. CANET. Indirect Determination of Proton T_2 and T_1 from Partial Nuclear Overhauser Enhancement of Carbon-13 Resonances	269

NOTES

J. FRIPIAT AND M. LETELLIER. Microdynamic Behavior of Water in Clay Gels below the Freezing Point	279
JOHN C. CHARKOUDIAN. Precise Spin Concentrations Using Aqueous Flat Cells	287
W. THOMAS DIXON. The Relation of Signal/Noise to Magnetic Field Strength and Sample Size in Magic-Angle-Spinning Solids Experiments	289
S. RAGHOTHAMA. Determination of Chemical-Shift Anisotropy of Molecules Dissolved in a Mixture of Two Liquid Crystals of Opposite Diamagnetic Anisotropies	294
M. CATHERINE DEPEW, MICHAEL CHAN, AND JEFFREY K. S. WAN. An Electron Spin Resonance Study of the Interactions between Amines and L-Ascorbic Acid in Organic Solvents	297
YOSHINORI MANMOTO. Determination of the Magnetic Field Strength in the Second Rotating Coordinate System	303
J. A. DEN HOLLANDER, K. L. BEHAR, AND R. G. SHULMAN. Use of Double-Tuned Surface Coils for the Application of ^{13}C NMR to Brain Metabolism	311

AUTHOR INDEX FOR VOLUME 57	536
----------------------------------	-----

The Subject Index for Volume 57 will appear in the December 1984 issue as part of a cumulative index for the year 1984.

Digitized by the Internet Archive
in 2023

Information for Authors

The *Journal of Magnetic Resonance* includes papers dealing with the theory, techniques, methods of spectral analysis and interpretation, spectral correlations, and results of magnetic resonance spectroscopy and related fields. The Editor seeks the assistance of expert referees in the evaluation of manuscripts of articles, but he alone is responsible for the final decision concerning acceptance.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Magnetic Resonance* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

A signed photocopy of the copyright assignment form which appears following this "Information" should be submitted to the Editor along with each manuscript. (This form will not be binding if the manuscript is not accepted for publication in the *Journal of Magnetic Resonance*.)

Fifty reprints of each paper are supplied without charge, and additional reprints may be ordered on a form that is sent to the authors with the proofs that the authors receive. The journal *assesses no page or publication charges*.

All manuscripts and books for review should be sent to the Editor, Wallace S. Brey, Department of Chemistry, University of Florida, Gainesville, Florida 32611.

Form of the Manuscript

Manuscripts should be submitted in triplicate. The original typewritten copy should be supplied; mimeo or xerographic reproductions are usually not acceptable. All typing must be double-spaced, including references, footnotes, and figure captions, on one side of paper approximately 22×28 cm (8.5×11 in.). Each page of the manuscript should be numbered. If the paper is lengthy, it may be divided into sections, but the sections should not be numbered. The first line of each paragraph is indented.

Cover Page. The first page contains the article title, the author's name, the laboratory where the work was done, and the address of the laboratory. At the bottom of this page should appear any footnotes to the title (indicated by superscript *, †, ‡).

Abstract. The second page of the manuscript for each regular paper should contain an abstract of 50–200 words, summarizing the nature and results of the research described. The abstract must be completely self-contained, having no references to items appearing in the body of the manuscript.

Equations, Symbols, and Abbreviations. Mathematical equations and symbols must be typewritten wherever possible. Equation numbers are given in *square* brackets to the right of the equation, and references in the text to equations should be in the form "Eq. [3]." Greek letters may be identified in pencil in the margin. Other non-standard mathematical symbols should be clearly identified, in a separate list if necessary. Symbols for vectors and tensors should be clearly marked. The American

Chemical Society's *Handbook for Authors*, 1978 edition, or the *Style Manual of the American Institute of Physics* should be followed for standard abbreviations, names, and symbols for units.

References. Literature references are cited in numerical order in the text by *in-line, parenthesized, italic numerals*. References to "unpublished" or "to be published" work from the author's laboratory should not be given. However, papers actually accepted may be referred to as "in press" if the name of the journal is included.

The references themselves are to be typed double-spaced on a separate sheet in numerical order. Each reference contains the author's initials, last name, journal name, volume, initial page number, and year in parentheses, *in that order*. The name of the journal is abbreviated in the style of *Chemical Abstracts Service Source Index*, 1980. For book references, the form is author's name, name of the book in quotation marks, editor's name (if any), edition if other than the first, chapter or page number, publisher's name, place of publication, and year of publication.

Footnotes. Authors are urged to give careful thought to the logical construction of the manuscript, so that explanatory or parenthetical footnotes need not be employed. Any footnotes which are indispensable are not intermixed with references, but are indicated in the text by consecutive, superscript numerals, and each footnote will then appear in the print at the bottom of the page on which it is cited. In the manuscript, any footnotes to be included are gathered together in numerical order on a separate page.

Tables. Tables are numbered consecutively with Arabic numerals and are mentioned in order in the text. Each table should be laid out carefully, so that minimum space is used and entries are accurately grouped and clearly labeled. Usually, a table should be arranged vertically, with more rows than columns. Vertical lines are not used to separate the columns. Each table is provided with a title and typed on a separate sheet of paper. Footnotes to the tables are placed directly below it and are indicated by superscript, lowercase, italic letters (*^{a,b,c}*).

Figures and Diagrams. Figures are numbered consecutively with Arabic numerals and are mentioned in order in the text. They must be carefully drawn in black, waterproof drawing ink, to draftsman's standards, with lettering by stencil or drawing machine. Freehand, penciled, or typewritten lettering is not acceptable. Lettering should include numerical scales and units for the two axes, and should be large enough to be legible after reduction of 50–60%. Legends are to be typed together on a separate sheet. Small figures must be mounted on sheets of full manuscript page size. Larger originals must be photographically reduced to page size and glossy high-contrast prints of this size must be supplied by the author. The original and two duplicates of each figure are required. Ink drawings should also be supplied for complex molecular formulas or diagrams which the printer cannot readily set in type. Illustrations in color can be accepted only if the authors defray the cost.

Communications and Notes

Communications are preliminary accounts of work of special importance or discussions of controversial but significant topics. A Communication must be especially carefully prepared. Since it may not be refereed and the author will not receive galley proofs for correction, it is the responsibility of the author to ensure that the manuscript as submitted is free of typographical or substantive errors. The length of a Communication should be no more than that corresponding to five printed pages. Notes are complete accounts of work of limited scope. Their brevity often permits expeditious handling. Communications and Notes require no abstract and are not divided into sections.
